Preventative health for women

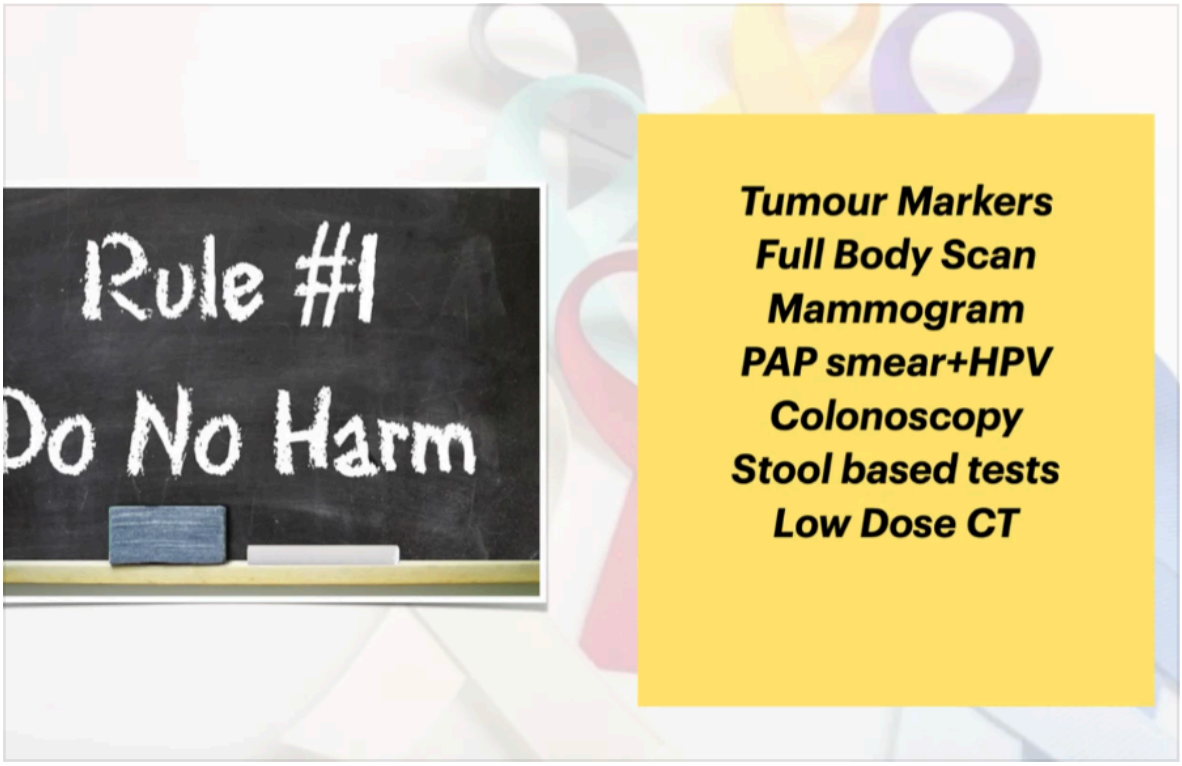
Modifiable risk factors :
1. Cigarette smoking
2. Excessive body weight

3. Poor diet

4. Expose body to sunlight

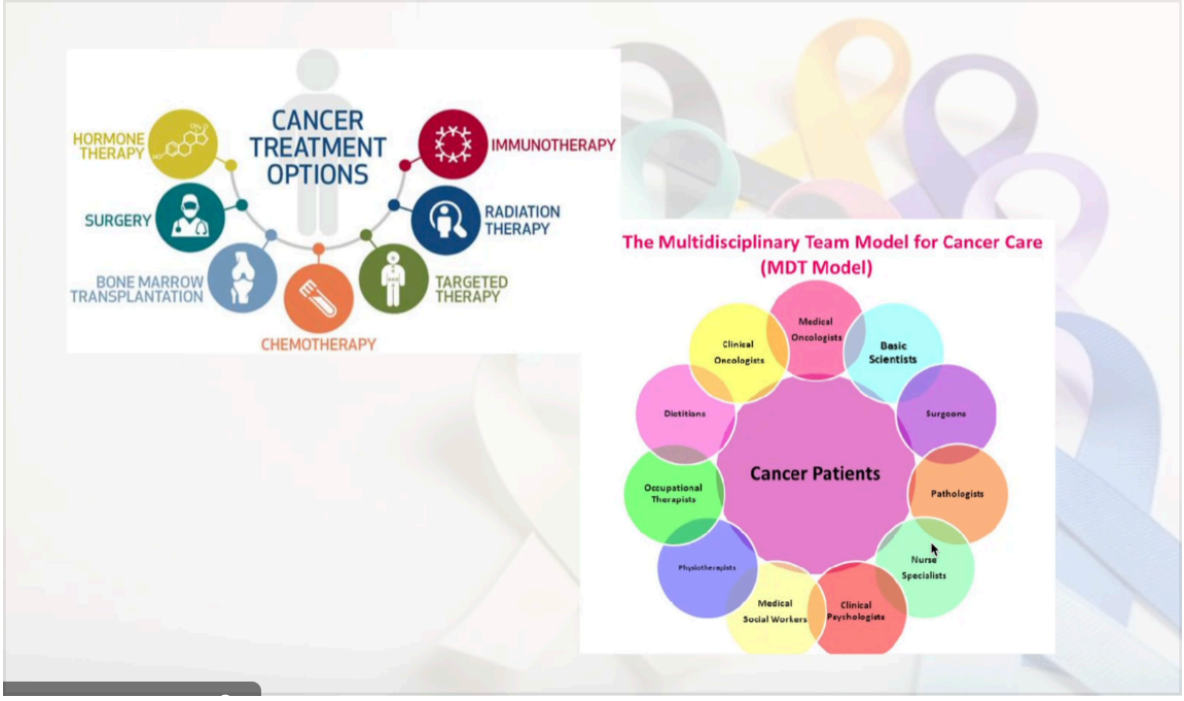
5. HPV vaccine
6. Take flue vaccine for every year
7. Eat colourful foods , fresh foods fruits veggies

Hepatitis B HPV vaccine - these 2 vaccine are necessarily
For cancer walk more sit less , Aim



Pep smears for 3 years >>

Biopsy =?



is even at its peak, mask up.

Dr.Aditi Chaturvedi

Try to keep green plants and all in your house. If possible, use a air purifier. All the, you know, physicians specially have a very mixed view about air purifiers. Some say go for it, some say no, but I would just say that.

Mask up
Try to keep green plants , put air purifier in , limit outdoor time
Vitamin injections need to take Once a year its a weekly course you don't have to take any injections take that

everyone should take once a year. It's a weekly course. You don't have to take any injection. Take that weekly 60,000 units course for six weeks and that then just take maintenance.

Dr.Aditi Chaturvedi

Every month. But everyone should take that weekly tablet for six weeks for sure. Once a year is good enough.
